

On 29.06.19 , class II was made to visit Biology Lab by Mrs Chanchal Bhatia to show the students Internal Organs of Human Body as it was the part of their syllabus. The students came in Biology Lab first time and they were very excited and very keen to know about the models and charts which are lying in Biology Lab. The students of class II saw the structure of skeleton, Human Heart, Human Ear and the Structure of Jaw etc.

The EVS teacher explained them in brief about the internal organs of human body.

These kinds of activity will definitely boost their confidence and spirit of learning towards Biology.
